

Spire.AI Talent.Exchange (TALEX) now available on Microsoft Intune

Dais World | 13/09/2024 06:47 PM

Spire.AI, a leading innovator in the Domain AI and Large Graph Model (LGM) for skills-powered solutions in the talent space, today announced the launch of TALEX, an AI Copilot app for exponential staffing and internal resourcing, on Microsoft Intune. TALEX is designed to revolutionise internal mobility and resource management enabling enterprises and staffing organisations to accelerate their talent management efforts.

Microsoft Intune is a cloud-based endpoint management solution that manages user access to organisational resources and simplifies app and device management across many devices, including mobile devices, desktop computers, and virtual endpoints used by enterprise users.

Microsoft Intune is an ideal springboard and a promising platform for TALEX to deliver Spire.AI's revolutionary AI-powered staffing and internal resourcing Copilot, to organisations globally. TALEX, already a part of App Store and Google Play Store, is now available in Microsoft Intune, providing enterprises a secure and simplified solution for managing talent resources, making it an essential tool for on-the-go talent supply chain management. Organisations can now apply comprehensive security policies and streamline device management for Talent.Exchange with this integration with Microsoft Intune.

Saurabh Jain, the Founder and CEO of Spire.AI, elucidates the transformative impact of this partnership, "TALEX on Microsoft Intune isn't just an initiative but makes it the only mobile app to be listed for exponential staffing designed to revolutionise enterprise resourcing, internal mobility and talent management. We're placing the power of Large Skill Graphs and Domain Intelligent AI-driven insights directly into the hands of talent decision-makers to optimise their internal mobility efforts, driving greater efficiency and competitiveness to orchestrate their workforce with unprecedented precision."

"Further, it also prepares a comprehensive skill inventory with skill expertise categorisation of employees for proactive talent mobility and hiring. With intuitive mobile app, organisations can engage with employees, communicate, collaborate, and act from anywhere, at any time. Additionally, Intune simplifies device, application, and user management through a centralised platform while enforcing compliance with corporate policies to ensure that only authorised users have access to TALEX," says Jain.

The strategic calculus behind this partnership is clear. Microsoft Intune's vast enterprise footprint offers TALEX unparalleled reach, positioning it alongside business-critical applications that form the bedrock of modern enterprises. As the global talent landscape evolves, Spire.AI TALEX on Microsoft Intune emerges as a cornerstone of next-generation workforce strategies, delivering the benefits of LGM for Skills and Domain Intelligent AI.

About Spire.AI

Spire.AI Copilot for Talent is a Domain AI-based full-stack talent technology solutions provider. Spire.AI supports the evolving talent operating model requirements of all Talent stakeholders of future ready companies that are transforming themselves as Skills based Organisations. The AI Copilot for Talent is powered by Large Graph Model (LGM) for Skills and empowers enterprises with solutions for revenue acceleration and operating margin management needs of the professional services industry, reduces cost of service delivery for the core services industry, and keeps talent relevant for future growth needs of all organisations. It simplifies and future-proofs the way talent is acquired, deployed, managed, reskilled, grown and retained.
